RASCAL
SPECTRUM ANALYZER AND LOGGER

Overview

A simple site survey system, RASCAL allows users to record up to 24 hours on a battery or on shore power as long as mission requires. It requires no special training for basic operation and minimal training for full functionality. Insert a battery or connect to shore power and press the selector button once to start a sample and twice to stop a sample. The RASCAL also has user configurable and selectable spectrum analysis profiles that can allow for multiple mission options.

Surveys are internally recorded, allowing multiple sites to be surveyed with a single RASCAL. Samples are downloaded to a provided laptop in Excel or viewable in a browser for easy evaluation. No laptop is needed for standalone data acquisition.

Benefits & Features

- User-customizable spectrum profile
- Single button set-forget operation
- Minimal user training required
- 70 MHz 6 GHz range
- Records up to 24 hours on a single BB2590 battery
- Records up to 12 hours on a single BB390 battery (included)
- Download data to Excel
- Field upgrade of software
- Laptop included
- GPS
- Small footprint < 1 cu ft
- 35 lbs.
